Location: Virar

CAREER OBJECTIVE:

An enthusiastic employee with highly motivated having bachelor of engineering degree. I have skills to work in software testing position which gives me opportunity to use my technical skills and giving scope for career and growth.

PROFESSIONAL SUMMERY

Product Manager with 3.8 years of experience in Capital Markets and Wealth Management domain, spanning Product Management and Quality Assurance. Skilled in driving digital transformation of HNI trading platforms, improving client onboarding journeys, stocks events & updates, designing intuitive UI/UX frameworks, and building robust testing strategies. Adept at collaborating with stakeholders, drafting PRDs, conducting API evaluations, and ensuring products align with business goals and regulatory requirements.

PROFESSIONAL EXPERIENCE:

1. **360 One WAM (1 year 10 months) : Product Manager + QA Analyst**

- Defined product roadmap for trading platforms (HNI users), aligning features with business goals.
- Collaborated with CXOs and cross-functional teams including engineering, UI/ UX,QA, marketing, and compliance to deliver high-quality features.
- Wrote BRDs/ PRDs, and user stories, & conducted benchmarking and analysis to support product design and improvements.
- Collected user/ business feedback to guide iterations, improving retention and engagement.
- Participated in the development of a multi-exchange order placement module supporting NSE and BSE with Intraday, Delivery, and MTF products, multiple order types, AMO trading, and real-time margin and brokerage visibility.
- Participated in designing, developing & delivering a fully automated digital KYC and HNI onboarding platform for Demat (single & joint holding patterns) and Broking accounts, transforming a previously manual process into an end-to-end automated flow by integrating front-end journeys with CDSL, NSE, BSE, OMS, and back-office systems.
- Designed & delivered fully functional market insights functionality by integrating CMOTS API's which allows user to stay up to date in stock market.
- Successfully designed & integrated "Broking account details" which allows user to access their respective account details & analyse account opening form.

- Designed & delivered stocks fundamentals feature to display performance of any stock in capital market by integrating CMOTS API's. By integrating this feature in app use was able to check yearly, quarterly, standalone & consolidated performance as well as shareholding patterns.
- Successfully implemented stocks alerts functionality which allows users to set up an alert to track the price of any stock in NSE & BSE cash segment.
- Performed various testing on all the implemented features to deliver defect free build. Have good knowledge of agile methodologies, STLC & defect tracking system.
- Hands on experience on Greek & OMNY Nest OMS.

2. GreekSoft Technologies (1 year 8 months) : QA Analyst

- Manual Testing and Load Testing on FIX protocol.
- Manual Testing in trade modification, Pending order window, Trades window and Net Position window
- Worked on Capital Domain in Exchange NSE, BSE as a Software test engineer.
- Sound Knowledge of My Sql, Postgres and Oracle Database.
- Having good experience in Release Management and handling team independently
- Complete idea about STLC, and familiar with software Testing Life Cycle.
- Prepared test scenarios and designed test cases and participated in test case review.
- Executed test cases and reported defects.
- Performed different type of testing like Black box Testing, Functional Testing, Regression Testing, Retesting, Performance Testing and Database Testing.
- Execute the test case to meet client requirement
- Expertise in defect tracking process using defect management tool Mantis Bug Tracker

TECHNICAL KNOWLEDGE:

- Tools: Jira, Confluence, Figma, Figjam
- AI Tools: Whimsical, Loveable, n8n, Figma make
- OMS Tools: OMNY Nest, Greek
- Testing Tools: Postman, Selenium
- Bug Tracking tools: Jira, Mantis

CERTIFICATIONS:

- Product management at NEXT Leap institution
- QA Analyst at Q-Spider institution

EDUCATION:

BE (Mechanical Engineering) from Mumbai university– 2019 pass out

STRENGTH & SKILLS:

- Product Strategy & PRD Creation
- Requirement Gathering & User Story Mapping
- UI/UX Design Wireframes & Optimization

- Capital Markets & Wealth Management Domain
- API Evaluation, Integration & Testing (Postman, Omnesys APIs)
- SDLC & STLC | Defect Lifecycle Management
- Sprint Management

PROJECT DETAILS:

- **Case Study: 1**

Problem statement: All active clients wants to see their broking & demat profile & account details.

Solution & Approach:

Solution was like implementing the profile API which is provided by the OMS system. That OMS system gives all the necessary details through the API response. So on front end client was able to see broking & demat profile & account details.

- **Case study: 2**

Problem statement: All active clients should be able to freeze their broking account.

Solution & Approach:

I have created a journey called “Account freeze journey”, through which user was able to freeze their respective demat & broking account with just one click. This journey was offline before the app goes live. Approach was like, if client initiates the freeze account journey then one just one click, a mail will get trigger to the account opening team & withing few minutes account will get freeze.

- **Case Study: 3**

Problem Statement: Client needs to see the market analytics like corporate action, ipo, announcement, bulk & block deal, FII & DII movements.

Solution & Approach:

I have provided a function that display all market analytics data at upfront on app dashboard. Here user can access to corporate actions which will give updates about events in stocks market. User can check open, closed & upcoming IPO & also check the details about it. User can access market announcements done by NSE & BSE to stay updated in market. Also user can check Bulk & block deals with just one click. FII & DII function is there which will display the required numbers that defines the dominance of FII/DII.

- **Case study: 4**

Problem Statement: Client wants to add stock alerts to get notify whenever stock price reaches to desired price.

Solution & Approach:

I have provided a feature called “Stock Alerts”, where user can set alerts according to price & percentage. User will be notify through push notification whenever stock price reaches to set price.

- **Case Study: 5**

Problem statement: Client wants to check the performance of the selected stocks.

Solution & Approach:

I have provided a feature where user can check all the fundamentals of that particular stock. User can check the yearly & quarterly performance & also can check standalone & consolidated data for that particular stock. User can analyse the share holding pattern in the same feature.

- **Case study: 6**

Problem Statement: Client wants to get update about the stocks news & events

Solution & Approach:

I have provided a feature where user can check stock events & news by integrating CMOTS API’s.
